HEALTH
PARTNERSHIP GUIDE

WHAT THAT LOOKS LIKE

Dr. Philip J. Landrigan MD MSc, will serve as a keynote speaker for this season's event. As one of the leading researchers on lead toxicity, Dr. Landrigan will share his perspective and understanding of the effects of toxic chemicals on the health of developing children. The contamination and toxicity of natural resources is an issue affecting all walks of life and the liveliness of our planet as a whole. As our keynote speaker, Dr. Landrigan will encourage participants to consider a family-centered approach to solving a contemporary health problem.

Along with the insightful presentation by Dr. Landrigan, participants will have the opportunity to partake in varying workshops where they can learn new skills, collaborate with various other members to improve their teamwork capabilities, and connect with partners, opening new avenues for their futures:

- Strengthen programming and abstract thinking skills with conferences teaching the basics of iOS development, Git and GitHub, and Python.
- Develop resumes and career ambitions through workshops focusing on personal brand and the professional environment in the modern, virtual, scientific world.
- Network and learn about industries and professional development through career spotlights and workshops from influential members of the scientific community.
- Explore and discuss the modern marvels of eco-conscious artificial intelligence, economic impacts of climate change, and machine learning techniques.

WHO WE ARE

Heights4Health is an annual global health challenge focused on bringing together undergraduate students of all academic backgrounds and experiences from Jesuit Catholic universities across the nation to research and devise complex and impactful solutions to global health issues affecting underrepresented communities all over the world. Over 48 hours, students are invited to attend several skill-building workshops, keynotes, and various programs to cultivate a collaborative and productive learning environment.

This year, Heights4Health will challenge participants to address the **contamination and toxicity of natural resources**. From microplastic buildup in our oceans to toxins aggregating in the atmosphere, our planet has endured permanent and significant damage to its ecosystems. In acknowledgement of these effects, we invite participants and partners to combine the Jesuit values of compassion and sacrifice with modern advancements and insights within the STEM field to create a launching pad for innovative, meaningful, and impactful solutions.

Our team is devoted to bringing the vibrancy of the hacker experience to the remote realm by incorporating seminars on how to maximize virtual presentations and improve virtual communication skills for all of our participants. In addition to the array of skill building workshops we will also provide some much needed breaks with virtual sunrise yoga and mindfulness, professional development workshops, movie screenings, and even some virtual scavenger hunts to showcase their creative talents!

GETTING INVOLVED

Heights4Health strives to attract some of the brightest minds from across the nation to collaboratively tackle demanding global issues. Collaboration and teamwork are key to the success of any movement; therefore, we need support in order to achieve it. Becoming a partner provides companies and organizations the opportunity to join us in our movement towards global change. For us, finding meaningful partnerships and collaborations take precedence over dollars and cents. We want to join hands with companies that share our value of being “men and women for others” so that together we can help grow the next generation of leaders and innovators to their highest potential.

We ask you to join us in creating a more **forward-thinking, conscientious, and equitable** society that puts the well-being of lives and livelihood above monetary and political gain. You could help set the standard that is necessary to save the world from the imminent crisis.

Let's stand together with science, innovation, and the people who need it.

VIRTUAL PARTNERSHIP BENEFITS

- Partner zoom room staffed by a company rep
- Small logo on website/newsletter
- Medium logo on website/newsletter
- Pre-event announcement email
- Host and event/workshop
- Large logo on website/newsletter
- Access to resumes
- Mentorship + volunteers

HOW YOU MIGHT HELP US

- Monetary contributions to fund operational costs, etc.
- Offer invaluable mentorship for our attendees
- Host an event or workshop
- Provide lab assistance/equipment/workspace/mentors
- Help us with our research
- Provide access to professionals in the field/industry knowledge

Heights4Health operates under Engineering Healthcare Innovations (EHI), a student-run organization on Boston College's campus that champions our mission of equitable and innovative global public health through research and service as well as technology. We're truly looking for partners who resonate with the EHI mission and who will stay connected with us and our community beyond Heights4Health. For more information on EHI visit our website at <http://engineeringhealthcareinnovations.com/>
